ABSTRACT

A clear and well-documented $\text{\LaTeX}$ document is presented as an article formatted for publication by ACM in a conference proceedings or journal publication. Based on the “acmart” document class, this article presents and explains many of the common variations, as well as many of the formatting elements an author may use in the preparation of the documentation of their work.

CCS Concepts

• **Software and its engineering** → **Open source model**; • **Human-centered computing** → **Open source software**; *Social tagging systems*.

KEYWORDS

Do, Not, Us, This, Code, Put, the, Correct, Terms, for, Your, Paper

1 Introduction

The article template adopted for CBSOft is an ACM-like version derived from the original ACM consolidated template. It preserves the visual identity and structural organization of the “acmart” class, while adapting its elements to comply with the formatting guidelines and editorial context of CBSOft and the Brazilian Computer Society (SBC).

Originally introduced by ACM in 2017, the consolidated template was designed to provide a consistent $\text{\LaTeX}$ style across a wide range of publications and to incorporate accessibility and metadata-extraction features to support digital libraries. In this adapted version, those principles are maintained, while ACM-specific submission requirements have been removed or adjusted to suit the CBSOft publication process.

2 Template Overview

As noted in the introduction, this ACM-like template for CBSOft is derived from the original “acmart” document class and can be used to prepare different types of submissions accepted by the conference, including full research papers, short papers, tool papers, and other publication formats defined by the CBSOft symposia and workshops. The template supports the main stages of the publication process,

from review versions to final camera-ready copies, through the selection of appropriate template styles and parameters.

This document presents the main features of the adapted document class and explains how to use its elements according to the CBSOft formatting guidelines. Since this template is based on the ACM consolidated format, authors familiar with the original “acmart” class will find its structure and commands largely preserved, while ACM-specific requirements have been removed or adjusted to fit the CBSOft publication process.

2.1 Template Parameters

There are a number of *template parameters* which modify some part of the applied template style. A complete list of these parameters can be found in the *$\text{\LaTeX}$ User’s Guide*.

Frequently-used parameters, or combinations of parameters, include:

- **anonymous, review**: Suitable for a “double-anonymous” conference submission. Anonymizes the work and includes line numbers. Use with the `\acmSubmissionID` command to print the submission’s unique ID on each page of the work.
- **authorversion**: Produces a version of the work suitable for posting by the author.
- **screen**: Produces colored hyperlinks.

This document uses the following string as the first command in the source file:

```
\documentclass[sigconf]{acmart}
```

3 Modifications

Modifying the template — including but not limited to: adjusting margins, typeface sizes, line spacing, paragraph and list definitions, and the use of the `\vspace` command to manually adjust the vertical spacing between elements of your work — is not allowed.

Your document will be returned to you for revision if modifications are discovered.

4 Typefaces

The “acmart” document class requires the use of the “Libertine” typeface family. Your $\text{\TeX}$ installation should include this set of packages. Please do not substitute other typefaces. The “lmodern”

and “l^times” packages should not be used, as they will override the built-in typeface families.

5 Title Information

The title of your work should use capital letters appropriately - <https://capitalizemytitle.com/> has useful rules for capitalization. Use the `title` command to define the title of your work. If your work has a subtitle, define it with the `subtitle` command. Do not insert line breaks in your title.

If your title is lengthy, you must define a short version to be used in the page headers, to prevent overlapping text. The `title` command has a “short title” parameter:

```
\title[short title]{full title}
```

6 Authors and Affiliations

Each author must be defined separately for accurate metadata identification. As an exception, multiple authors may share one affiliation. Authors’ names should not be abbreviated; use full first names whenever possible. The inclusion of e-mail addresses for all authors is mandatory and must follow the font style defined by the template.

Immediately below the title, each author must be declared using the following format:

```
\author{FirstName Surname}
\affiliation{
  \institution{Department Name, Institution/University Name}
  \city{City}
  \country{Country}}
\email{email@email.com}
```

The use of grouped author names or grouped e-mail addresses is not allowed, as illustrated below:

Grouping authors’ names or e-mail addresses, or providing an “e-mail alias,” as shown below, is not acceptable:

```
\author{Brooke Aster, David Mehldau}
\email{dave,judy,steve@university.edu}
\email{firstname.lastname@phillips.org}
```

For papers with multiple authors, the surnames of the authors must be included in the page headers. The list of author names shown in the header must not exceed the column width. Therefore, only the surnames should be used, preferably in the form “Surname et al.” when appropriate. This shortened list must be explicitly defined using the following command, placed immediately after the last `\author{}` declaration:

```
\renewcommand{\shortauthors}{Surname1stAuthor et al.}
```

Omitting this command may result in the automatic use of the full list of authors in the page headers, which can cause text overlap and layout issues.

The `authornote` and `authornotemark` commands allow a note to apply to multiple authors — for example, if the first two authors of an article contributed equally to the work.

Before submitting the camera-ready version, authors must verify the following:

- All authors are declared individually using the required format;
- All e-mail addresses have been correctly included;
- The font used for e-mail addresses is consistent with the template;

Table 1: Frequency of Special Characters

Non-English or Math	Frequency	Comments
Ø	1 in 1,000	For Swedish names
π	1 in 5	Common in math
\$	4 in 5	Used in business
Ψ ₁ ²	1 in 40,000	Unexplained usage

- The shortened author list defined by `\shortauthors` contains only surnames and fits within the column width of the header.

7 Sectioning Commands

Your work should use standard L^AT_EX sectioning commands: `\section`, `\subsection`, `\subsubsection`, `\paragraph`, and `\subparagraph`. The sectioning levels up to `\subsubsection` should be numbered; do not remove the numbering from the commands.

All numbered section and subsection titles must follow the same capitalization style: only the first letter of the first word should be capitalized (sentence case). Do not use title case or full capitalization in section headings.

Simulating a sectioning command by setting the first word or words of a paragraph in boldface or italicized text is **not allowed**.

Below are examples of sectioning commands.

7.1 Subsection

This is a subsection.

7.1.1 Subsubsection. This is a subsubsection.

Paragraph. This is a paragraph.
Subparagraph This is a subparagraph.

8 Tables

This ACM-like C^BSoft template, based on the “acmart” document class, includes the “booktabs” package — <https://ctan.org/pkg/booktabs> — for preparing high-quality tables.

Table captions are placed *above* the table.

Because tables cannot be split across pages, the best placement for them is typically the top of the page nearest their initial cite. To ensure this proper “floating” placement of tables, use the environment **table** to enclose the table’s contents and the table caption. The contents of the table itself must go in the **tabular** environment, to be aligned properly in rows and columns, with the desired horizontal and vertical rules. Again, detailed instructions on **tabular** material are found in the *L^AT_EX User’s Guide*.

Immediately following this sentence is the point at which Table 1 is included in the input file; compare the placement of the table here with the table in the printed output of this document.

To set a wider table, which takes up the whole width of the page’s live area, use the environment **table*** to enclose the table’s contents and the table caption. As with a single-column table, this wide table will “float” to a location deemed more desirable. Immediately following this sentence is the point at which Table 2 is included in the input file; again, it is instructive to compare the placement of the table here with the table in the printed output of this document.

Command	A Number	Comments
<code>\author</code>	100	Author
<code>\table</code>	300	For tables
<code>\table*</code>	400	For wider tables

A black and white photograph of a woman in a white dress driving a vintage open-top car with a child in the passenger seat. The car is parked on a street with a large hedge and a building in the background.

The use of BibT_EX for the preparation and formatting of one’s references is strongly recommended. Authors’ names should be complete — use full first names (“Donald E. Knuth”) not initials

(“D. E. Knuth”) — and the salient identifying features of a reference should be included: title, year, volume, number, pages, article DOI, etc.

The bibliography is included in your source document with these two commands, placed just before the `\end{document}` command:

```
\bibliographystyle{ACM-Reference-Format}
\bibliography{bibfile}
```

where “bibfile” is the name, without the “.bib” suffix, of the Bib_{TeX} file.

Citations and references are numbered by default. A small number of ACM publications have citations and references formatted in the “author year” style; for these exceptions, please include this command in the **preamble** (before the command “`\begin{document}`”) of your $\LaTeX$ source:

```
\citestyle{acmauthoryear}
```

Some examples. A paginated journal article [2], an enumerated journal article [11], a reference to an entire issue [10], a monograph (whole book) [24], a monograph/whole book in a series (see 2a in spec. document) [18], a divisible-book such as an anthology or compilation [13] followed by the same example, however we only output the series if the volume number is given [14] (so Editor00a’s series should NOT be present since it has no vol. no.), a chapter in a divisible book [37], a chapter in a divisible book in a series [12], a multi-volume work as book [23], a couple of articles in a proceedings (of a conference, symposium, workshop for example) (paginated proceedings article) [3, 16], a proceedings article with all possible elements [36], an example of an enumerated proceedings article [15], an informally published work [17], a couple of preprints [6, 8], a doctoral dissertation [9], a master’s thesis: [4], an online document / world wide web resource [1, 29, 38], a video game (Case 1) [28] and (Case 2) [27] and [26] and (Case 3) a patent [35], work accepted for publication [32], ‘YYYYb’-test for prolific author [33] and [34]. Other cites might contain ‘duplicate’ DOI and URLs (some SIAM articles) [22]. Boris / Barbara Beeton: multi-volume works as books [20] and [19]. A presentation [31]. An article under review [7]. A couple of citations with DOIs: [21, 22]. Online citations: [38–40]. Artifacts: [30] and [5].

12 Recommendations for Appendices

If your work needs an appendix, add it before the “`\end{document}`” command at the conclusion of your source document.

Start the appendix with the “appendix” command:

```
\appendix
```

and note that in the appendix, sections are lettered, not numbered. This document has two appendices, demonstrating the section and subsection identification method.

13 Conclusion and Future Work

<text included by the authors>

ARTIFACT AVAILABILITY

This section must be included immediately after the Conclusion and before the Acknowledgments section. It must not be numbered and must be titled exactly as **ARTIFACT AVAILABILITY**, using uppercase letters and the singular form.

If the paper provides research artifacts (such as datasets, source code, scripts, models, or experimental packages), the authors must describe what is available, where it can be accessed, and under which license or usage conditions.

For papers written in Portuguese, this section must be titled **DISPONIBILIDADE DE ARTEFATO**, using uppercase letters and the singular form.
